

ANNEX 1.

Every Woman Every Child Global Strategy for Women's, Children's and Adolescents' Health: country data on the 16 key indicators

This data annex provides a snapshot, as of 28 June 2017, of the country data and/or estimates on the subset of 16 key indicators of the *Every Woman Every Child Global Strategy for Women's, Children's and Adolescents' Health* (EWEC *Global Strategy*) for all 194 WHO Member States. Notes and references on the indicators are shown after the table.

The latest information for the full set of 60 EWEC *Global Strategy* indicators, for all countries, is available from the *Global Strategy* data portal at the WHO Global Health Observatory: <http://apps.who.int/gho/data/node.gswcah>. The portal will be updated regularly, and therefore the data in this annex may differ from the information on the portal.

Some of the figures presented in this annex are point estimates, and should be interpreted within the context of uncertainty intervals which are available from the original sources provided in the table at the end of the annex. In the data portal the figures for some indicators are shown to 1 or 2 decimal places, whereas this annex rounds nearly all figures to the nearest whole number.

KEY

Grey shaded cell = no country-level data/estimate available on the EWEC *Global Strategy* portal or data/estimate from before 2005

Regular cell = data/estimate from 2010 to date

Regular cell with () = data/estimate for years between 2005 and 2009 inclusive

Notes:

^a The adolescent deaths per country are from the WHO Global Health Estimates for 2015. These are estimated by WHO based on UN life tables and analyses of death registration data submitted to WHO, using standardized methods intended to maximize comparability across countries. The UN Population Division medium variant population estimates for 10 to 14 years and 15 to 19 years for 2015 are used as denominators to compute the rate.

^b Until the full UHC service coverage index is available, the Global Strategy uses a composite coverage index of RMNCH interventions as a proxy. The coverage indicator is the weighted average of coverage of a set of eight preventive and curative RMNCH interventions. It gives equal weight to four stages in the continuum of care: family planning, maternal and newborn care, immunization, and case management of sick children. The estimate is calculated as follows: $1/4 (FPS + (SBA+ANC1)/2 + (2DPT3+MSL+BCG)/4 + (ORT+CPNM)/2)$. Where: FPS = family planning need satisfied; SBA = skilled birth attendance; ANC1 = at least one antenatal visit with a skilled provider; DPT3 = three doses of diphtheria-pertussis-tetanus vaccine; MSL = measles vaccination; BCG = BCG (tuberculosis) vaccination; ORT = oral rehydration therapy for children with diarrhoea; and CPNM = care-seeking for children showing symptoms of pneumonia.
